

Safe and Sound®

Summary

While no company can completely avoid multi-million dollar negligent security liability, they can in many cases prevent a tragedy before it happens. By demonstrating a good faith effort in the training of staff, organizations can assist in providing a safe workplace for their employees and customers.

Based on the works of Francis D'Addario, a noted expert and practitioner in the field of workplace security and loss prevention, *Safe and Sound*® provides managers and employees with the basics of violence prevention and skills to use in recognizing and responding to potentially harmful situations.

Safe and Sound® is available from our master trainers or through a train-the-trainer certification program.
